

# Quick Deployment Guide

---

## GitHub Pages Deployment (5 Minutes)

---

### Step 1: Create GitHub Repository

1. Go to [GitHub](https://github.com) (<https://github.com>) and log in
2. Click the “+” icon → “New repository”
3. Name it: `sdwc-website` (or any name you prefer)
4. Choose “Public”
5. Don’t initialize with README (we already have one)
6. Click “Create repository”

### Step 2: Push Your Code

Open terminal in the project folder and run:

```
# If you haven't already initialized git (already done):
# git init
# git branch -m main

# Add your GitHub repository as remote:
git remote add origin https://github.com/YOUR_USERNAME/sdwc-website.git

# Push your code:
git push -u origin main
```

### Step 3: Enable GitHub Pages

1. Go to your repository on GitHub
2. Click “Settings” (top right)
3. Click “Pages” (left sidebar)
4. Under “Source”:
  - Select “Deploy from a branch”
  - Choose “main” branch
  - Choose “/ (root)” folder
5. Click “Save”

### Step 4: Access Your Website

Your site will be live at:

```
https://YOUR\_USERNAME.github.io/sdwc-website/
```

 **First deployment takes 2-5 minutes**

---

## Mailchimp Email Signup Integration

---

### Quick Setup (5 Minutes)

1. **Create Mailchimp Account:** [mailchimp.com](https://mailchimp.com) (<https://mailchimp.com>)

2. **Create Audience:**

- Go to “Audience” → “Create Audience”
- Fill in details

3. **Get Form Code:**

- “Audience” → “Signup Forms” → “Embedded Forms”
- Copy the form action URL (looks like):

```
https://YOURDOMAIN.us1.list-manage.com/subscribe/post?u=XXXXXX&id=YYYYYY
```

4. **Update index.html:**

- Find line ~205: `<form action="#"`
- Replace `#` with your Mailchimp URL:

```
html
<form action="https://YOURDOMAIN.us1.list-manage.com/subscribe/post?u=XXXXXX&id=YYYYYY"
```

5. **Commit and Push:**

```
bash
git add index.html
git commit -m "Add Mailchimp integration"
git push
```

---

## Pre-Deployment Checklist

---

- [x] All files are in the repository
- [x] Git repository initialized
- [x] All links tested locally
- [x] Responsive design verified
- [x] README.md included
- [x] Favicons included
- [ ] Mailchimp form integrated (optional - can be done after deployment)
- [ ] Custom domain configured (optional)

## Quick Fixes

---

### Links Not Working?

- Ensure all internal links use relative paths (no `/` at the start)
- Check that file names match exactly (case-sensitive)

### Images Not Showing?

- Verify images are in `images/` and `assets/` folders
- Check file names match exactly

### Styles Not Applied?

- Clear browser cache (Ctrl+Shift+R or Cmd+Shift+R)
  - Check that Tailwind CDN is loading
  - Verify `css/style.css` path is correct
-
